"Cloning and nucleotide sequencing of bluetongue virus genomes.";
Prog. Clin. Biol. Res. 178:363-370(1985).
-I- FUNCTION: THE VP3 PROTEIN IS ONE OF THE FIVE PROTEINS (WITH VP1, VP4, VP6 AND VP7) WHICH FORM THE INNER CAPSID OF THE VIRUS.
-I- SIMILARITY: BELONGS TO THE REOVIRUSES VP3 PAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

MEDLINE=22278866; PubMed=12391170; Hu P., Wu S., Sun Y., Yuan C.-C., Kobayashi R., Myers M.P., U.S.A. 99:16899-16903(2002). Proc. Natl. Acad. Sci.

CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate {RNA}(N).
SUBUNIT: RNA polymerase III consists of about 15 different
subunits. This subunit is the second largest component of RNA

polymerase III. SUBCELLULAR LOCATION: Nuclear

Non-alpha nicotinic acetyloholine receptor subunit.
Aplysia californica (California sea hare).
Rukaryota, Metazoa, Mollusca, Gastropoda, Orthogastropoda, Apogastropoda, Heterobranchia, Buthyneura, Opisthobranchia, Anaspidea, Aplysioidea, Aplysioidea, Aplysia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sadreyev R.I., Penchin Y.V., Meleshkevich E.A., Moroz L.L.;
"Non-alpha nicotinic acetylcholine receptor subunit from the
individual identified neurons of Aplysia californica.";
Submitted (Nov-2000) to the EMBL/GenBank/DDBJ databases.
-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN (BY SIMILARITY).
-!- SIMILARITY: BELONGS TO THE LIGAND-GATED IONIC CHANNEL FAMILY.

Sequence 60, Application US/60483917

GENERAL INFORMATION:

APPLICANT: Gan, Li

APPLICANT: Chin, Daniel J

TILE OF INVENTION: WIGGER ASSOCIATED WITH NEURODEGENERATIVE DISORDERS

TILE REFERENCE: 00208-0013-P2US00

CURRENT APPLICATION NUMBER: US/60/483,917

CURRENT PILING DATE: 2003-06-30

NUMBER OF SEQ ID NOS: 78

SOFTWARE: Patentin version 3.2

SEQ ID NO 60

LENGTH: 563
